OPPORTUNITY OF SOILLESS CULTIVATION OF MULBERRY SAPLINGS

Summary

Soilless cultivation gives an opportunity to organize some kind of accelerated production of mulberry plants. At present, by means of hydroponics of the Institute it’s possible to produce approximately 0,8-1,0 billion plants of mulberry in two years, which will provide the republic with reconstruction of already forgotten sericulture and will stimulate the production of natural silk, all the more as the conditions of the Ararat valley are strictly favourable.
